Equity Strategies

Strategy Name	Minimum	Strategy Goal
Capital Appreciation	\$25,000	Established companies with a long-term track record
Dividend Select	\$25,000	Companies with a history of strong and consistent dividends
Intrinsic Value	\$50,000	High-quality companies at a reasonable price.
Strategic Alpha	\$25,000	Undervalued-issues with potential to deliver above-market returns
Concentrated Growth	\$25,000	Focused strategy to generate long-term capital appreciation

Fixed Income Strategies

Strategy Name	Return Potential	Volatility
Strategic Fixed Income	Balanced	Medium
High Yield	Aggressive	High

Strategy Construction

Capital Appreciation (Cap App) seeks to own high quality companies with a proven history of earnings, dividend growth, and stability.

The model utilizes S&P Global Market Intelligence Quality Ranking, which measures 10- year history of earnings and dividend growth and stability.

Historically, stocks with the best Quality Rankings posted higher profit margins, higher return on capital, and stronger cash flows than lower quality stocks. Higher-quality stocks also incurred less volatility.

Capital Appreciation

Glossary:

Beta:
Measure of the volatility, or systematic risk, of an individual stock in comparison to the unsystematic risk of the entire market.

Turnover Ratio:
The amount of trading the portfolio experienced in the previous 12 months.

P/E Forward:
The P/E forward ratio (price-to-earnings) denotes the weighted harmonic average of all the P/E's of the securities in the portfolio.

Avg. Weighted Market Cap:
The market cap of a security is equal to the price of the security multiplied by the number of shares outstanding at the company level. A weighted average is then taken of all the securities in the portfolio.

Net Debt-to-EBITDA:
Measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or equivalents, divided by EBITDA.

Charles Ruff, CFA
Portfolio Manager

Characteristics

Advisory services offered through Novem Group, an SEC-Registered Investment Adviser. In calculating model performance, dividends are assumed to be reinvested at equal weight, and the performance does not consider capital gains taxes or commissions and fees. Performance is gross of advisor's fees and commissions. Past performance is not indicative of future results. No representation is made that any returns indicated will be achieved. This strategy involves risk and principal loss is possible. This performance calculation does not consider timing differences between the model portfolio selections and purchases made based on those selections by actual investors. Transaction fees, margin, and taxes will affect the actual outcomes for investors. Diversification does not assure a profit or protect against loss in a declining market. This illustration shows hypothetical growth of an initial investment of \$100,000 with a max program fee of 70 bps. Small and medium capitalization companies tend to have limited liquidity and greater price volatility than large capitalization companies. Investments in foreign securities involve greater volatility and political, economic and currency risks, as well as differences in accounting methods. These risks are greater for emerging markets.

Strategy Construction

The Dividend Select strategy is designed for long-term total return. The goal is to provide investors with the opportunity to invest in high quality stocks that offer an attractive dividend yield and capital appreciation.

In order to be considered for the Dividend Select strategy, a stock must have a yield above that of the S&P 500 and the company must not have cut the regular dividend in the last five years.

In addition to dividend yield and consistency, the Dividend Select strategy also seeks to own stocks that will outperform the benchmark over the next 12 months.

Strategy Construction

The Intrinsic Value strategy uses six specific investment criteria to potentially identify undervalued securities available at a reasonable price. These criteria are listed below:

- I. Free cash flow of at least \$250 million
- II. Net profit margin of 15% or more
- III. Return on equity of at least 15% for each of the past three years.
- IV. A dollar's worth of retained earnings creating at least a dollar's worth of shareholder value over the past five years.
- V. Stocks with market capitalization of at least \$500 million
- VI. Overpriced stocks are identified by comparing our five-year discounted cash flow estimate to current price

Strategy Construction

The Concentrated Growth strategy is comprised of stocks considered to have superior risk-adjusted capital appreciation potential. To screen for potential strategy positions we use the STARS (Stock Appreciation Ranking) System.

To enter the Concentrated Growth strategy stocks must have a 5-STAR ranking. Stocks can remain in the strategy if the ranking drops to 4-STAR. If a stock's ranking drops below 4-STAR, it will be removed.

Glossary:

Effective Duration:

A calculation used to approximate the actual, modified duration of a callable bond. It considers that future interest rate changes will affect the expected cash flows for a callable bond.

Credit Quality:

Informs investors of a bond or bond portfolio's creditworthiness or risk of default. A company or security's credit quality may also be known as its "bond rating."

Yield:

The income returned on an investment, such as the interest received from holding a security. The yield is usually expressed as an annual percentage rate based on the investment's cost, current market value, or face value.

The Strategic Fixed Income strategy offers a blended fixed income strategy. It seeks to produce income while maintaining downside protection.

ETF Strategies

Why ETFs?

- Costs
 - ETFs typically have low expense ratios meaning the investor gets to keep more of their money
- Smart Asset Allocation
 - ETFs can provide diversification across numerous asset classes
- Tax Efficiency
 - Not subject to frequent capital gains taxes like mutual funds
- Low trading fees
 - Intra-day liquidity and free transactions on many platforms like TD, Schwab, E-Trade.

	Minimum	Strategy
Global Income	\$5,000	Targets a high level of income while offering the potential for capital appreciation.
Global Value	\$5,000	Seeks to provide exposure to international equities with a lower P/E multiple.

Strategy Construction

The Global Income strategy seeks to take advantage of some of the high dividend yield opportunities offered by companies outside of the US.

The strategy seeks to improve diversification through an ETF structure. Additionally, exposure to foreign equities provides broad exposure to global equity market.

The Global Income strategy relies on liquid, well-established ETFs from some of the leading players in the ETF space (Fidelity, Blackrock, First Trust, VanEck).

The Global Income strategy is a proprietary strategy that utilizes globally diversified ETFs to seek a high level of income while maintaining the potential for appreciation.

Advisory services offered through Novem Group, an SEC-Registered Investment Adviser. In calculating model performance, dividends are assumed to be reinvested at equal weight, and the performance does not consider capital gains taxes or commissions and fees. Performance is gross of advisor's fees and commissions. Past performance is not indicative of future results. No representation is made that any returns indicated will be achieved. This strategy involves risk and principal loss is possible. This performance calculation does not consider timing differences between the model portfolio selections and purchases made based on those selections by actual investors. Transaction fees, margin, and taxes will affect the actual outcomes for investors. Diversification does not assure a profit or protect against loss in a declining market. Investments in foreign securities involve greater volatility and political, economic and currency risks, as well as differences in accounting methods. These risks are greater for emerging markets. Unlike mutual funds, ETFs do not necessarily trade at the net asset values of their underlying securities, which means an ETF could potentially trade above or below the value of the underlying portfolios. Additionally, because ETFs trade like stocks on exchanges, they are subject to trading and commission costs, unlike open-end investment companies.

Strategy Construction

The Global Value strategy seeks to own companies that are cheaper than their benchmark. Academic research suggests that cheaper securities will outperform over the long-run.

The strategy uses an ETF structure to improve diversification across the global equity market.

ETFs are tax efficient and also offer simplicity for foreign taxes and currencies.

The Global Value utilizes liquid, well-established ETFs from some of the leading players in the ETF space (Fidelity, Blackrock, First Trust, VanEck).

The Global Value strategy seeks to own companies that are cheaper than their benchmark based on various valuation metrics.

Advisory services offered through Novem Group, an SEC-Registered Investment Adviser. In calculating model performance, dividends are assumed to be reinvested at equal weight, and the performance does not consider capital gains taxes or commissions and fees. Performance is gross of advisor's fees and commissions. Past performance is not indicative of future results. No representation is made that any returns indicated will be achieved. This strategy involves risk and principal loss is possible. This performance calculation does not consider timing differences between the model portfolio selections and purchases made based on those selections by actual investors. Transaction fees, margin, and taxes will affect the actual outcomes for investors. Diversification does not assure a profit or protect against loss in a declining market. Investments in foreign securities involve greater volatility and political, economic and currency risks, as well as differences in accounting methods. These risks are greater for emerging markets. Unlike mutual funds, ETFs do not necessarily trade at the net asset values of their underlying securities, which means an ETF could potentially trade above or below the value of the underlying portfolios. Additionally, because ETFs trade like stocks on exchanges, they are subject to trading and commission costs, unlike open-end investment companies.
